

SAMPLE OUTPUT

Sample Script: 5 AI Tools Every Tradie Needs in 2026

Channel: Trade Tech Tips | Length: ~8 minutes | Style: Talking head + screen demos

HOOK [0:00-0:30]

Look, if you're still quoting jobs on the back of a napkin and chasing invoices through your email, you're leaving money on the table. In the next eight minutes, I'm going to show you five AI tools that are saving Australian tradies hours every single week — and most of them are free to start.

I'm not talking about ChatGPT writing your emails. I'm talking about tools built specifically for construction and trades that actually understand what we do.

Let's get into it.

TOOL 1: AI QUOTING [0:30-2:00]

First up — AI-powered quoting. This is the big one.

You describe the job in plain English. "Bathroom renovation, 3x2 metres, full strip and retille, new vanity, new shower screen." The AI pulls from a database of over 5,000 materials with real Australian trade pricing, calculates your labour, adds your markup, and spits out a professional PDF quote.

We're talking minutes instead of hours. And because it knows the difference between a bathroom reno and a deck build, it includes the right materials automatically — waterproofing, adhesives, all of it.

[SCREEN DEMO: Show a quote being generated in real-time]

TOOL 2: SAFETY DOCS [2:00-3:30]

Number two — automated safety documents.

Every tradie knows the pain of SWMS. You need them for every job, they take forever to write, and half the time you're copying last week's document and changing the address.

AI safety tools generate SWMS, JSAs, and toolbox talks from a job description. They include the right hazards, control measures, PPE requirements, and even reference current WHS legislation.

[SCREEN DEMO: Show a SWMS being generated]

TOOL 3: INVOICE AUTOMATION [3:30-5:00]

Tool number three — AI invoicing.

Here's the workflow: you finish a job, you pull out your phone, you type "deck construction, 4x6 metres, spotted gum decking, 16 hours labour" — and you've got a professional invoice with line items, GST calculated, your business details, payment terms, the lot.

No more sitting down at 9pm trying to remember what you did last Tuesday.

TOOL 4: CONTENT REPURPOSING [5:00-6:30]

Number four — and this one's for tradies who want to grow their business online.

You write one blog post about your latest project. AI takes that single piece of content and turns it into a LinkedIn post, an X thread, an Instagram caption, and an email newsletter snippet.

Same message, five platforms, fraction of the time.

TOOL 5: EMAIL REWRITING [6:30-7:30]

Last one — AI email rewriting.

You know when you get an email from a difficult client and your first draft reply is... let's say "direct"? AI email rewriters take your rough draft and rewrite it in the perfect tone. Professional, diplomatic, friendly — whatever the situation needs.

Some of these even work as browser extensions, so you can rewrite directly in Gmail or Outlook.

CTA [7:30-8:00]

Those are five AI tools that are actually useful for tradies right now. Not next year, not "coming soon" — right now.

If you want to try any of these, I've put links in the description below. Most of them have free tiers so you can test before you commit.

If this was useful, hit subscribe. I'm putting out more content on how AI is changing the trades in Australia. No hype, no jargon — just tools that work.

See you in the next one.
